

SWASTIK NANDY

DATA SCIENTIST INTERN

swastik.nandy@outlook.com | West Bengal, Kolkata - 700129 | +91 7439774145

SUMMARY

I am a Final-year Computer Science student specializing in Machine Learning, proficient in Python, SQL, and data manipulation (Pandas, NumPy). Familiar with ML frameworks (scikit-learn, TensorFlow, PyTorch) and skilled in statistics, visualization, and analytical problem-solving. I enjoy working in fast, agile and dynamic environments always seeking scopes of collaboration.

EDUCATION

- B.Tech in Computer Science & Technology | University of Engineering & Management, Kolkata (CGPA - 7.98 | August 2022 - Present)
- XII (CISCE) | St. Judes High School, Madhyamgram (82.33 % | July 2021)

SKILLS

- PROGRAMMING LANGUAGES** - Java, Python, Rust
- DATABASES** - MySQL, PostgreSQL
- DEVELOPMENT FRAMEWORKS / LIBRARIES** - Fast API, Spring Boot, Maven, Tokio
- CLOUD** - Amazon Web Services (AWS), Google Cloud Platform (GCP)
- CONTAINERIZATION** - Docker
- VERSION CONTROL** - Git, GitHub
- ML/DL LIBRARIES / FRAMEWORKS** - NumPy, Pandas, Scikit-learn, PyTorch

PROJECTS

- HOTEL MANAGEMENT SYSTEM - (Java, Spring Boot, Maven, Hibernate, React JS, Tailwind CSS, PostgreSQL, Flyway) | [GitHub Repository](#)**
 - Designed and developed a full-stack hotel booking platform with a React(SPA) frontend and Spring Boot backend, supporting real-time room availability, dynamic pricing, and smooth booking workflows.
 - Built a smart filter system to search available rooms by type, branch, and date range, with dynamic redirection logic to a unified Booking page based on backend-driven availability checks.
 - Implemented PDF receipt generation & transactional email notifications using a custom service pipeline with PDFService, EmailService, and webhook integration post-booking & Stripe integration for payment interface.
 - Integrated dynamic entity relationships in PostgreSQL with live synchronization between Room, Branch, and Booking tables using JPA and custom service logic for auto-updating room counts per branch.
 - Planned full CI/CD pipeline deployment using Docker for containerization, GitHub Actions for build/test automation, and cloud-based deployment for scalable production hosting.
- REAL-TIME CRYPTO TICK PREDICTOR - (Python, Rust, Tokio, Redis, PostgreSQL, NumPy, Pandas, Scikit-learn, Grafana) | [GitHub Repository](#)**
 - Built a WebSocket-driven Redis ingestion pipeline in Rust handling nearly 160k OHLCV/trade rows per day across 20 cryptocurrencies within 5-6 ms end-to-end latency.
 - Engineered a DAG-based feature engine computing 10+ TA indicators (RSI, MACD, Bollinger, ATR, etc.) and labeling >100k training samples for intraday prediction datasets.
 - Architected an MLOps pipeline for an XGBoost based tick classifier achieving ~27% higher intraday tick prediction accuracy vs. baseline strategies on BTC, ETH, SOL, ADA and 15+ altcoins on daily OHLCV + Price Data.
 - Integrated transformer-based sentiment analysis of financial news (Coindesk RSS, symbol-mapped), enriching Redis with per-headline sentiment scores for multimodal training.
 - Designed multimodal signal fusion (price + volume + sentiment) inside DAG pipelines, improving predictive stability and reducing false signals by ~18%.
 - Integrated Grafana dashboards & MLflow for real-time monitoring of latency, throughput, and prediction accuracy; achieved >99.9% uptime and seamless zero-downtime rollouts.

ACHIEVEMENTS

- Solved 200+ Data Structures and Algorithms (DSA) problems on LeetCode, demonstrating strong problem-solving skills and proficiency in Java programming, object-oriented principles (OOP), and algorithm optimization. Developed hands-on experience in arrays, linked lists, trees, graphs, recursion, and dynamic programming through self-learning and competitive coding.

CERTIFICATIONS

- Technology Job Simulation - Deloitte Australia (Forage.com)
